SUMMARY

Java Backend Engineer with enterprise experience building secure and scalable financial services applications using Spring Boot, REST APIs, JPA/Hibernate, and CI/CD workflows. Experienced in backend development for payment-domain systems with focus on transactional consistency, microservices architecture, and distributed systems fundamentals.

EDUCATION

Jaypee University of Information Technology (JUIT)
B.Tech in Computer Science and Engineering; CGPA: 8.02 / 10

Solan, HP, India
Aug 2021 – Jun 2025

EXPERIENCE

Infosys Ltd.
System Engineer – FS-ADM Unit (Client: American Express)

Bengaluru, India
Sep 2025 – Present

- Built backend components using **Java and Spring Boot** – REST API design, JPA/Hibernate persistence, request validation, and global exception handling – within a financial services delivery environment.
- Wrote tests using **JUnit and Mockito**, analyzed code quality with **SonarQube**, and worked with **Jenkins CI/CD**, Maven, Git, and Postman across build and validation workflows.
- Collaborated within an **Agile/Scrum** team across standups, sprint planning, **code reviews**, and knowledge transfer sessions in a banking and payments domain.
- Analyzed application logs and **API workflows** to support debugging and service validation activities alongside senior engineers.

PROJECTS

FinPay – AI Fintech Platform | *Java, Spring Boot, PostgreSQL, Redis, Spring AI* | [GitHub](#)

- Built a secure fintech backend supporting wallet management, peer-to-peer transfers, transaction tracking, KYC verification, and **role-based access control** – designed for horizontal scalability using microservices concepts and containerization-ready architecture.
- Implemented **ACID-compliant transactional workflows**, JWT authentication, optimistic locking, and Redis caching to support secure and scalable financial operations across concurrent transaction flows.
- Designed an **AI-powered fraud monitoring and analytics system** using **Spring AI / LLM integration**, featuring real-time risk scoring, behavioral analysis, conversational AI, memory-aware agents, and autonomous monitoring workflows.

Audible Backend Platform | *Java, Spring Boot, PostgreSQL, JWT, Docker*

- Built scalable **Spring Boot REST APIs** for audiobook catalog management, purchases, and user library services following **microservices architecture** principles.
- Implemented secure authentication using **Spring Security and JWT** with role-based authorization; containerized using **Docker** for portable deployment.
- Designed relational schemas in **PostgreSQL** with persistence via **JPA/Hibernate**; wrote unit tests using **JUnit and Mockito**.

Coding Profile Scraper | *Python, Django, REST APIs, BeautifulSoup*

- Built a backend service aggregating coding statistics from **LeetCode**, **Codeforces**, and **GitHub** via automated data extraction using BeautifulSoup and custom REST APIs.

TECHNICAL SKILLS

Languages: Java, Python, C++, JavaScript, SQL

Backend: Spring Boot, REST APIs, Microservices, Spring Security, JWT, JPA/Hibernate, Swagger/OpenAPI

Testing & Quality: JUnit, Mockito, SonarQube

Databases: PostgreSQL, MySQL, MongoDB

DevOps: Docker, Git, Jenkins CI/CD, Maven, Linux, Microsoft Azure

GenAI Tools: GitHub Copilot, ChatGPT, Spring AI, Claude | **Frontend:** React.js, TypeScript

ADDITIONAL INFORMATION

Coding Profiles: LeetCode | GitHub

Certifications: Java & OOP, Spring Boot, GitHub Copilot, React (Infosys LEX) | Microsoft Azure AZ-204 (*Pursuing*)
